E-Khidmat: E-Learning Project

1. **Software Design**

   Predesigned template for the E-Khidmat project using HTML, CSS, Bootstrap.
   Backend database connectivity using PHP and SQL database for all the details.

2. **Features**

   Login for students, teachers, and admin. Each student can see the courses, grades of their courses, attendance, and timetable. Furthermore, the student can check his previous transcript and get it to print. The teacher can log in and check the students in his class, can edit their grades and check his schedule as well. The admin can access the portal and edit the transcript, make a timetable and can also see and/or respond to requests by students and/or teacher. The admin can also post a notice to the common notice board which can be edited by admin and teacher. However, the student can only read the notices posted.

   Learning Management Features

   Along with the CMS features, the students can also see the course contents uploaded by the teacher and can also view their specific grades and submit their projects.
   The teacher can upload files for students to read and download their assignments uploaded by the students.
